

A short brief about myself and the decision to opt for the Edyoda Tech-skill course:

Hello, My name is Ankit Mishra. I am a person with a lot of enthusiasm to learn new things and I follow the motto "The more you climb the higher you go".

I currently live in Hyderabad and I was born and raised in Jamshedpur. I completed my basic schooling in Hyderabad and from the beginning I was having a great interest in computers and new smart technologies so I decided to go for Computer Science engineering after my intermediate.

With this, I completed my Btech in computer science Engineering this year (2021) also I am working as a Technical support Associate for an MNC in Hyderabad so that I can look after my personal and educational expenses and support my family as well.

Now the question comes how I decided to go for this Tech skill program from Edyoda. I always wanted to grow my career and start myself in a very good position in the IT industry so just for my experience, I joined a small MNC where my role is to analyze and give support to the Andriod app and Smart IOT devices as it suited my interest of knowing the smart technologies and its functionality. Also, this helped me to know and grow in corporate culture and it was great exposure for me.

One day while using social media I came to know about Edyoda and its program where it is graphically shown how a fresher can start his career as a Data Scientist or a developer in the IT industry and can boost his career after gaining some major skills.

So I contacted the Edyoda admission team and appeared for the scholarship test and scored good marks there and it helped me to reduced my fees up to 50% and after this, I started my journey to gain and enrich myself with some new and demanding skills.

Till now I am learning Python with Mohit sir and looking forward to making my career using this wonderful platform.

Thank you.
